

## Clamps and Clamp Holders

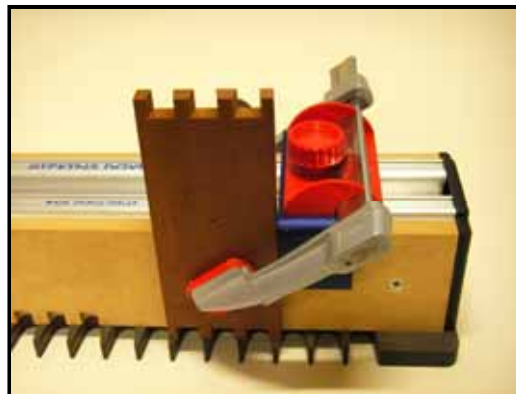

I have recently been using Bessey Kliklamps to hold the workpiece on the jig when cutting finger joints and dovetail joints. They have an offset head and tail so they can reach over the stop, which makes them ideal especially with the finger joints there is always a stop against either side of the work. I have designed a clamp holder specially for the Kliklamps that fits under the knob on the stop. This locates the Kliklamp in the correct position and also holds it at the correct height, safely above the cutter. These holders are now available and will be sold as a pair.

Bessey Kliklamp

Clamp Holder fitted to stop

Clamp and clamp holder in use

Bessey Kliklamps and clamp holders are available from Gifkins Dovetail as optional extras. If using 2 stops then a clamp holder fitted to each stop works best. For boards wider than about 120 mm it is necessary to use 2 clamps.
