

LARGE FINGER JOINT TEMPLATE

F15 TEMPLATE UPGRADE

The new F15 finger joint template cuts beautifully clean joints in any timber due to its specially made solid carbide spiral cutter. This cutters cuts so well that I will experiment with solid spiral cutters for the F5 template and possibly for the small straight cutters for dovetailing.

Suitable for timber from 14 mm up to 22 mm thick, for larger boxes, blanket chests and furniture sized work. Available for both the new model and the old model Gifkins Dovetail Jig. Please state model when ordering: The old model has 5 countersunk template mounting holes, new model has only 2.

See the table on the "Template Specifications" page for full details.
