

# Eliminate cutter slip!

New 1/2" to 1/4" reducing collet  
made specially for Gifkins Dovetail

Whilst Roger's old style reducing collet was an improvement on the standard collets that come with most routers, this new design dramatically improves the clamping pressure, so that cutter slip is a thing of the past. Roger has modified the design so it now has 8 full slots, 4 up from the bottom end and 4 down from the top. The new collets only require very gently clamping pressure to hold the cutter quite firmly. The collets are precision ground (centerless grind) with no measurable runout.

The new collets are 32 mm long overall, giving much more clamping length than regular collets, and they have a flange at the top so they can't drop down inside the chuck on the router. This flange also makes it much easier to remove the collet from the router!

Only available from Gifkins Dovetail
